BMC Gitlab - branch for OEM

如果你的案子是OEM開的, gitlab上應該是在customers folder之下沒問題.

但如果你的案子是channel,但後來有OEM要求改東西,請在gitlab channel source code之下create bra 具體如下:

4

- 1. git clone git@192.168.36.8 (mailto:git@192.168.36.8):/<your channel project path>
- 2. git branch oem-abc //新增oem-abc分支
- 3. git checkout oem-abc //切換到oem-abc分支
- 4. modify your code for oem-abc //修改你要改的code
- 5. git commit -m "message for this oem" //commit
- 6. git push origin oem-abc //上傳gitlab, gitlab會在srever建立oem-abc分支

以上新增oem-abc的branch, 它往後的改動都不會影響原來主幹(master).

- 一些有用的command:
 - 1. git branch -a //display all branches and current selected branch
 - 2. git checkout master //switch to master
 - 3. git checkout oem-abc //switch to oem-abc

另外請上傳你的ssh_key到qitlab方便qit直接clone or push, 不用每次打password浪費時間.
